PREFACE

WHY THIS PLAN?

When a major oil or chemical spill occurs, the results can be disastrous. People potentially most directly affected by a spill, coastal landowners, fishermen, aquaculturists, naturalists, tourism operators, and others are justifiably concerned and may want fast answers to questions such as “What happens now?” and “What can I do to help?”

This document is meant to provide sound information at the fingertips of those in position to answer questions from a worried public and to provide information that enables an effective spill response. It identifies the lead agencies who will take charge in the event of a spill in or affecting the St. Croix Estuary and/or Passamaquoddy Bay. It also provides detailed information on community resources that may be accessed in a spill response. Finally, some descriptive and locative information is provided on sensitive resources that could be impacted by a spill.

The framework for decision-making and deploying resources for spill response can be very complex, involving numerous agencies, which have a mandate, and many individuals who are trained to take action. In recent years, much attention has been given to ensuring that the response to spills in the Bay of Fundy and other coastal areas is as effective as it can be, given available resources. The international nature of the St. Croix Estuary and Passamaquoddy Bay makes spill response here even more complex in terms of coordinating agency responsibilities and multiple interests.

NOTE RE: MAPS

The information presented on the following maps is intended for general information only. For up to date information refer to the appropriate Federal, Provincial, or Municipal agencies or their representatives.

Current information and up-dates are also available from the Regional Environmental Emergencies Team (REET).

Unless otherwise noted, all maps reproduced in this Contingency Plan were prepared for the
St. Croix Estuary Project by Philip Holmes.

1.0 INTRODUCTION

This document is prepared and maintained by the community with the assistance of the Canadian Coast Guard, Government Agencies, and the Response Organizations.

1.1 PURPOSE

- ❖ To provide basic direction to the community in the event of a spill.
- ❖ To identify community resources available to the community and incoming responders.
- ❖ To provide a consistent approach to contingency planning at the community level.
- ❖ To assist in the definition of interface roles and responsibilities between Federal, Provincial, and Municipal officials.
- ❖ The components of this plan are contained in the Table of Contents.

2.0 NOTIFICATION

2.1 ENVIRONMENTAL EMERGENCY NUMBER

In the event of an oil spill or an environmental emergency, call **1-800-565-1633 (24 hours).**

Your contact will be the Canadian Coast Guard Operation Centre, who will notify the appropriate Government Agencies.

When reporting an incident to the operations centre, callers should give their name (optional), telephone number, and the time the spill was sighted.

Important things you should try to note when you report a spill:

What is spilled, how much, and where is it located? Is the spill on the land, in the water, and is it moving? Do you know the source of the spill? Is the spill an immediate threat to public safety or business?

NOTE: gasoline and chemical spills should also be reported directly to the local fire department.

If you do not know all the answers do not wait.

Call **1-800-565-1633** so a response can begin.

3.0 GEOGRAPHIC BOUNDARIES

3.1 NARRATIVE DESCRIPTION OF AREA COVERED BY SPILL RESPONSE TRAINING.

THIS PLAN COVERS THE FOLLOWING AREAS:

St. Croix River Estuary—from the head of the estuary at the Milltown dam to its mouth situated at a point between Joe's Point on the Canadian side of the International Boundary and Liberty Point on the American side. The estuary waters shall include Oak Bay, Pagan's Cove, and the Waweig River Estuary.

Passamaquoddy Bay—including St. Andrews Harbour, Navy Island, Chamcook Bay, Minister's Island, Bocabec Bay, Hardwood Island, Hospital Island, Nurse's Island, all estuarine rivers flowing into Passamaquoddy Bay and all shorelines on the western side of Passamaquoddy Bay from Joe's Point to Indian Point thence to the mouth of the Digdeguash River whereat this plan will overlap the Spill Response Plan of Eastern Charlotte Waterways (ECW) to the mouth of the Magaguadavic River. This plan will continue to overlap the ECW plan along the Mascarene shore to L'Etete Passage thence southwesterly along the western shores of McMaster, Pendleton, and Deer Islands where this plan will overlap the West Isles Clean Environment Spill Response Plan to Western Passage between Deer Island, New Brunswick, Canada and Washington County, Maine, the International Boundary north to the St. Croix River Estuary mouth.

In accordance with spill plan guidelines, an inland boundary of approximately five (5) kilometers is recommended, however, this is variable according to tidal flows, estuarine areas, tidal surge, prevailing currents, navigations, Community Action Partnership Program (CAPP) boundaries, and other considerations.

3.2 TOPOGRAPHICAL MAPS (1:50 000)

The areas to be covered by this spill plan can be found on Canadian Hydrographic Service charts #4124 and # 4332.

Topographical details of lands surrounding this spill plan area may be found on NTS maps #21G/3 (St. Stephen), #21G/2 (St. Andrews), and #21B (Eastport).

4.0 COMMUNITY'S ROLE

4.1 GENERAL

The community will identify local resources (see section 7 & 8) and provide sensitivity information (see section 9) to aid in spill response.

4.2 PLAN MAINTENANCE

The community will maintain and update the community contingency plan with the assistance of the Coast Guard, various Government Agencies, and the Response Organizations.

4.3 INTERFACE

The community will work with the responding agencies to determine the definition of interface roles and responsibilities.

5.0 LEVELS OF RESPONSIBILITIES

5.1 POLLUTER (RESPONSIBLE PARTY)

The polluter (responsible party) has the first responsibility for initiating effective action to counteract an environmental emergency. The polluter also has financial responsibility for damage and cleanup costs incurred as result of the spill. The responsibility is subject to any liability arrangements or limitations provided by statute or court decisions, or by international conventions in force and ratified by Canada at the time of the incident. If the polluter chooses not to initiate cleanup actions or if the situation is of such magnitude that the polluter is unable to respond adequately, or if the polluter's response is inappropriate, ineffective, or unsafe, the Coast Guard will appoint an ON SCENE COMMANDER (OSC) to assume command and control of the spill response.

5.2 DEPARTMENT OF FISHERIES & OCEANS AND CANADIAN COAST GUARD

Canadian Coast Guard: The Canadian Coast Guard has the lead role in responding to those marine emergencies where:

Department of Fisheries & Oceans, by legislation, regulations, interagency agreement and precedent, has been authorized.

OR

Assignment of authority has not been established but the Federal Government instructs the Department of Fisheries & Oceans, because of its authorities, marine expertise and resources, to lead the response.

The Canadian Coast Guard is responsible to investigate and act as lead agency for spills originating from vessels within Waters of Canadian Interest, under its jurisdiction. In these cases, the CCG is responsible to ensure that the vessel owner complies with the **Canada Shipping Act (CSA)** and accepts responsibility for cleanup. The CCG will also investigate spills originating from drill rigs when the rigs are not in a drilling mode and has responsibilities with respect to mystery spills.

Department of Fisheries and Oceans:

The Department of Fisheries and Oceans is responsible for managing and providing information and advice regarding fisheries resources and their habitats, as well as scientific advice in relation to fish.

5.3 ENVIRONMENT CANADA

Environment Canada, **Environmental Protection Branch (EPB)**, leads the investigation of spills originating from federal facilities and federal vessels. EPB also has shared responsibilities with Fisheries and Oceans for spills impacting waters

frequented by fish, under the **Fisheries Act** and the **Canadian Environmental Protection Act**.

EPB is responsible for ensuring that regional mechanisms are in place for timely and effective environmental emergency response efforts. To this end, the **Regional Environmental Emergencies Team (REET)** has been organized to provide consolidated, coordinated, and comprehensive environmental information and advice concerning environmental impacts, resource sensitivities, environmental forecasting, contingency planning, cleanup techniques and priorities, and a host of other matters which arise while planning and responding to emergency events which affect or risk environmental quality.

While **REET** is chaired by Environment Canada, it includes a large number of federal and provincial agencies that have expertise, information, responsibilities and/or authority relevant to environmental emergencies and environmental protection. Private industry and industry associations also participate in **REET** as they have significant interest in emergency response. Coastal communities will link into the **REET** process through the **Regional Coordinator, Community Action Partnership Program (CAPP)**.

5.4 OFFICE OF CRITICAL INFRASTRUCTURE, PROTECTION & EMERGENCY PREPAREDNESS (OCIEP)

This agency has the mandate to advance civil preparedness in Canada for emergencies of all types by facilitating and coordinating among federal institutions and also in cooperation with provincial governments, foreign governments, and international organizations, the development and implementation of civil emergency plans.

5.5 NATURAL RESOURCES CANADA (NRCAN)

In the Maritime Region, EMR maintains the Atlantic Geoscience Centre to provide scientific advice in the area of coastal geomorphology, to determine the impact of cleanup methods on beaches and to conduct research aimed at a better understanding of beach processes throughout Atlantic Canada. Atlantic Geoscience Centre can also provide technical advice on chemical and toxic substances and their interaction with coastal and marine sediment; shoreline video coverage is also available.

5.6 CANADA-NOVA SCOTIA OFFSHORE PETROLEUM BOARD

Under the **Canada-Nova Accord Implementation Act**, CNSOPB is responsible for environmental as well as health and safety matters associated with oil and gas activity. CNSOPB is the lead agency for response to spills associated with exploration and production activity in their area.

5.7 CANADA PORTS CORPORATION

Marine emergency incidents are reported to Ports Canada authorities, who are the designated lead agency for spills from vessels from within their area of jurisdiction (Halifax, Saint John, Belledune). Canada Ports Corporation and the Canadian Coast Guard have memorandums of understanding (MOU's) designating CCG as the lead resource agency to respond to vessel spills in Canada Ports Corporation harbours.

5.8 TRANSPORT CANADA – TRANSPORT OF DANGEROUS GOODS

Transports of Dangerous Goods (TDG) inspectors are responsible for the enforcement of the Transport of Dangerous Goods Regulations as they apply to land, water, and air transport. TDG maintains a 24-hour national response centre called CANADIAN TRANSPORT EMERGENCY CENTRE (**CANUTEC**) in Ottawa. It provides investigative services during transport emergencies involving chemicals and other dangerous goods.

In an emergency, CANUTEC may be called collect at 613-996-6666 (24-hours).

CANUTEC provides a national bilingual advisory service. It is staffed by experienced professional chemists trained in interpreting technical information and providing emergency response advice. When an emergency call is received by **CANUTEC**, the Emergency Response Advisor (ERA) obtains relevant information about the emergency and recommends appropriate response actions for the protection of the public and for the stabilization and containment of the dangerous goods involved.

5.9 NEW BRUNSWICK DEPARTMENT OF ENVIRONMENT AND LOCAL GOVERNMENT

The New Brunswick Department of Environment (NBDOE) acts as lead agency for spills that fall under provincial jurisdiction. It is responsible for the designation of disposal sites and disposal procedures. In addition, NBDOE is a resource agency for human resources, surveillance, cleanup, and environmental advice. They are normally responsible for providing provincial environmental advice and, where appropriate, soliciting input from other provincial government agencies such as fisheries, health, and mines and energy. The NBDOE also investigates spills originating from land-based sources or sewers as well as spills affecting potable water supplies.

5.10 ROYAL CANADIAN MOUNTED POLICE (RCMP)

The RCMP primary responsibilities at the accident site are for traffic and crowd control, dealing with casualties, explosives disposals, bomb threats, evacuations and investigation of criminal matters. By virtue of being the first on the scene, the RCMP may also be obliged to handle initial spill containment.

5.11 CANADIAN HERITAGE, PARKS CANADA

Parks Canada operates and maintains a significant number of national parks and heritage sites in the Atlantic Region. All the national parks have contingency plans to respond to environmental emergencies under their jurisdiction. Emergencies Section of Environment Canada liaises closely with Parks Canada staff during large incidents to share response resources and minimize the environmental impacts.

5.12 NEW BRUNSWICK EMERGENCY MEASURES ORGANIZATIONS (NBEMO)

The New Brunswick Emergency Measures Organization is the lead agency for incidents where public safety is the prime concern and can provide assistance to other lead agencies as required (e.g. Evacuation, search and rescue, surveillance).

6.0 RESPONSE ORGANIZATION ROLE

6.1 GENERAL

A certified **Response Organization** has been created to ensure that a capability exists to deal with oil spills in the Canadian marine environment. Every bulk oil tanker over 150 gross tonnes, every dry cargo vessel over 400 gross tonnes, and all designated oil handling facilities (OHF's) are required by the Canada Shipping Act to have an arrangement with a certified response organization. All of the above are referred to as clients by the response organization.

The **Response Organization** may respond to a client's request for assistance in the event their property is involved in an oil spill. The **Response Organization** may provide operational management for the client who is the responsible party in the event of a spill. Operational management includes:

Logistics: The procurement of resources to support the operation.

Planning: The identification of sensitivities, shoreline impact assessment prioritization of activities, waste disposal coordination, application of cleanup techniques, health and safety plan development, and documentation.

Operations: The application of the procured resources, i.e., people and equipment to control, contain, and clean up spilled product.

Finance: Payment of costs incurred by the Response Organization and invoicing for services rendered.

NOTE: THESE DEFINITIONS ARE RESPONSE ORGANIZATION DOCTRINE.

The Response Organization is not responsible for the effects of an oil spill. This responsibility remains with the polluter. Command and control of all activities remains with the polluter. In the event the polluter does not accept this role, the Canadian Coast Guard assumes command and control of the incident and the Response Organization may be hired by the Canadian Coast Guard.

The Response Organization will also plan for the protection of identified sensitivities prior to oil spills occurring in its geographic area of response, and will work with communities to this end.

In the Bay of Fundy geographic area, which includes Passamaquoddy Bay and the St. Croix Estuary, the designated Response Organization is:

8.0 ENVIRONMENTALLY SIGNIFICANT AREAS

Areas of Environmental significance along the mainland coastal region of Western Charlotte are each diverse and unique in their recognized qualities.

This is a list of the Environmentally Significant Areas from Digdeguash to St. Stephen.

- ❖ St. Croix River Estuary—Feeding and staging area for ducks, geese, shorebirds, and gulls; Nesting sites for Bald Eagles.
- ❖ St. Andrews Headland—Wintering Purple Sandpipers. Feeding and staging area for waterfowl, shorebirds, and gulls.
- ❖ Sam Orr Pond—Glacial origin; Salt Marsh.
- ❖ Oven Head Headland—Early Devonian felsic volcanics that dip toward the sea.
- ❖ Oak Bay/Spoon Island—Pebble-Conglomerate unconformably overlies black slate on Spoon Island.
- ❖ Minister's Island—Feeding grounds for wintering Cormorants and Purple Sandpipers that use the tidal mudflats.
- ❖ Highway 1, Exit 14 to St. Andrews—Gabbro that is intruded by light coloured diorite.
- ❖ Hardwood Island—The island is an important stopover for migratory birds.

18.0 WHERE DEBRIS ACCUMULATES

AREA:

ST. STEPHEN AND ST. ANDREWS

There is minor debris accumulation along the Canadian shoreline of the St. Croix Estuary, however, debris does tend to accumulate along the western shoreline of Passamaquoddy Bay particularly in small coves and bays between Indian Point (St. Andrews) and the mouth of the Digdeguash River. For updated information, refer to NBDOE and NBFA as well as Environment Canada representatives.

For American mapping information contact the US Coast Guard.

42.2 HUMAN USE

Recreational (beaches, boating, angling, diving, etc.,)

Refer to maps – Appendix A

42.3 BIOLOGICAL

Breeding grounds (mammal and fish), aquaculture sites, herring weirs, clam flats, scallop and lobster grounds, rockweed beds, etc.

Refer to maps – Appendix A

42.4 ARCHEOLOGICAL

Historical sites, Archeological sites, old ruins, burial grounds, etc.

Refer to maps – Appendix A

43.0 GLOSSARY / DEFINITION

Area Plan – A subordinate plan to the Regional Contingency Plan prepared in each Coast Guard Region; areas based on a subdivision of the Region into manageable groupings of resources based on PARS, provincial boundaries, lake systems etc.; a plan which will guide Coast Guard on the specifics to conducting a response in a given area including personnel, involvement by industry, and special considerations.

Appropriate Response – A response that deals with a marine spill to protect the environment in a manner fitting the unique characteristics and requirements of the spill based on available information and response techniques. It may be amended during the incident as a result of additional or updated information.

Dedicated Response Capability – The amount of response resources which must remain within the confines of the Designated Port to which it has been assigned, and which cannot be moved without prior permission of the Canadian Coast Guard.

Designated Oil Handling Facility – Any facility, including an oil terminal, which is used in the loading or unloading of oil to or from ships that is designated as such pursuant to subsection 660.2(8) of the Canada Shipping Act.

Environmental Sensitivities – Areas containing natural, cultural, or manmade features which may be threatened during an oil spill. These features may represent socioeconomic value (either through resource extraction or non-consumptive use of the resource) and/or life support value (e.g. productive habitat).

Lead Agency – An agency that is designated by statute, inter-agency agreement, cabinet decision and/or custom and precedent to lead the response to a marine spill on behalf of the government.

Marine Spill – When a pollutant or pollutants are entering, or are in imminent danger of entering into waters of Canadian interest including the inter-tidal zone between the maximum low tide and the maximum high tide as well as the back shore area affected by storm condition.

Federal Monitoring Officer – A Coast Guard Official appointed to oversee and monitor a non-government directed response to marine pollution

Oil – Petroleum in any form including crude oil, fuel oil, sludge, oil refuse, and refined products.

Oil Pollution Emergency Plan (OPEP) – A plan, which a ship as defined in part 660.2 of the Canada Shipping Act and an oil handling facility that is designated by the Minister, are required to have in accordance with Part XV of the Canada Shipping Act.

Oil Tanker – A ship that is constructed or adapted primarily to carry oil in bulk in its cargo spaces.

On-Scene – A location where an oil spill has occurred or in the case where pre-planning can demonstrate that mitigation can be more effective by deploying resources at alternate locations, shall be considered on-scene.

On-Scene Commander (OSC) – The person responsible* for the deployment of the required resources on-scene. (*Responsible for logistics, planning and executing a response to marine pollution.)

Polluter – Refers to the owner of the ship: The person having for the time being, either by law or by contract, the rights of the owner of the ship as regards to possession and use thereof.

Pollutant – Subject to its definition in the Canada Shipping Act, includes any substance that, if added to any waters, would degrade the quality of those waters to an extent that is detrimental to their use by man, fish or plant.

Protection of Public Interest – To prevent, and/or minimize, a marine spill impact on the safety, health, social, economic, environmental, and other interests of the public.

Regional Environmental Emergency Team (REET) – A group of experts from federal, provincial, and other agencies in a region, which provides consolidated environmental and scientific advice, as required, to the Coast Guard and the polluter's On-Scene Commander during a spill incident. It is normally chaired by Environment Canada, which is responsible for the establishment of REET in all regions.

Resource Agency – Any agency that owns, controls and/or has access to resources required by an On-Scene Commander from another government department for the conduct of an operational response. A resource agency may be any federal, provincial, or local government department, agency or board, and may include any commercial or private organization.

Resources – This term may be used to describe persons, equipment, funds and information required in a spill response.

Response Organization – Any person or organization in Canada in respect of which a certificate of designation is issued by the Commissioner, Canadian Coast Guard pursuant to subsection 660.4(1) of the Canada Shipping Act.

Ship – Any description of vessel, boat or craft designed, used or capable of being used solely or partly for marine navigation, without regard to method of, or lack of, propulsion.

Waters of Canadian Interest – Includes:

Waters over which Canada claims jurisdiction, such as inland waters, internal waters, and the territorial sea. Waters where Canada licenses or otherwise exercises control over activities, such as offshore mineral explorations and fishing, including those waters outside the territorial sea covered by the Territorial Sea and Fishing Zones Act, the Oil and Gas Production and Conservation Act, and the Arctic Waters Pollution Prevention Act.

Waters where by international agreement, Canada has some jurisdiction or responsibility, including waters covered by the Canada-US Joint Plan, the Canada-Denmark Agreement for Cooperation relating to the Marine Environment.

Waters where the federal government instructs agencies to exercise control and/or conduct operations.
